<b>X</b> <b>Regional, International and Development Economics</b>					
General Management and Economics					
Data Science and Quantitative Economics					
<b>Learning outcomes</b> The participants learn to understand and apply fundamental theories of international monetary economics. They are expected to remember basic concepts, to explain core theories of international monetary economics and to apply them in form of an analysis of economic shocks and their impact on exchange rates, the money market and output/income.					
<b>Content</b> The course offers an introduction to international monetary economics. Theoretical aspects of international monetary economics are covered, such as international capital flows and exchange rates. In addition, the impact of different exchange rate systems on the effectiveness of monetary and fiscal policy is analysed. Also discussed are international financial crises and the European Monetary System.					
<b>Teaching methods</b> Lecture and Tutorial
